Version: 15.4.1

On this page

Page.createPDFStream() method

Generates a PDF of the page with the `print` CSS media type.

Signature:

```
class Page {
  createPDFStream(options?: PDFOptions): Promise<Readable>;
}
```

Parameters

Parameter	Type	Description
options	PDFOptions	*(Optional)* options for generating the PDF.

Returns:

☰   🏁 **Puppeteer**   pdf   ✕

Remarks

NOTE: PDF generation is only supported in Chrome headless mode.

To generate a PDF with the `screen` media type, call `` `page.emulateMediaType('screen')` `` before calling `page.pdf()`.

By default, `page.pdf()` generates a pdf with modified colors for printing. Use the `` `-webkit-print-color-adjust` `` property to force rendering of exact colors.
